PawsTrack Desktop App

Application Installation and Use Guide

This guide provides detailed instructions for the successful installation and basic use of the PawsTrack application.

1. System Requirements

Make sure your computer meets the following minimum requirements before proceeding with the installation:

- **Operating System:** Windows 10/11 (64-bit).[1]
- **Processor:** Dual-core processor or higher.[1]
- **Memory (RAM):** 4 GB of RAM.[1]
- **Disk Space:** 500 MB of free disk space.[1]
- **SQL Server**: Express Edition or any version superior to 2016.[1]
- **Database** The database must be created on the SQL Server.

2. Software Installation

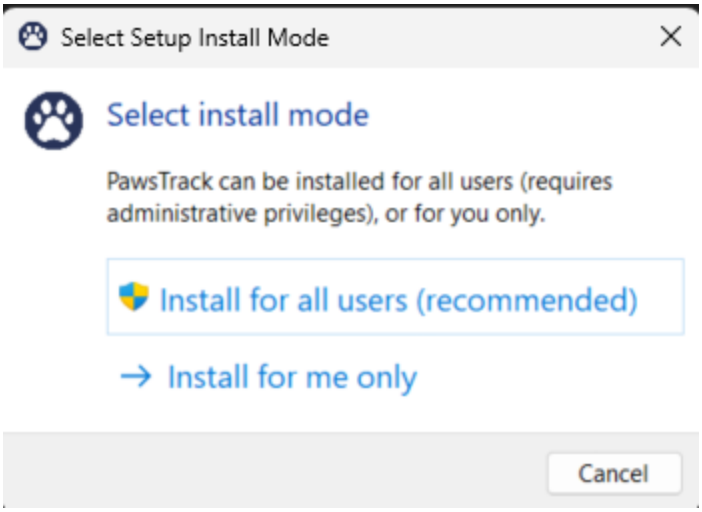
Follow the steps below to install the application on your system.

2.1 Download

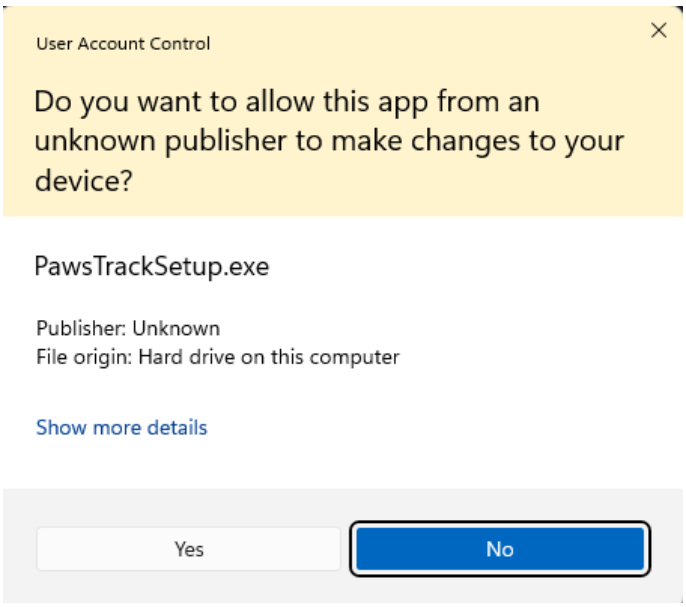
1. Download the latest installation file from this link: PawsTrackSetup.exe
2. The file is named: PawsTrackSetup.exe

2.2 Installation Process

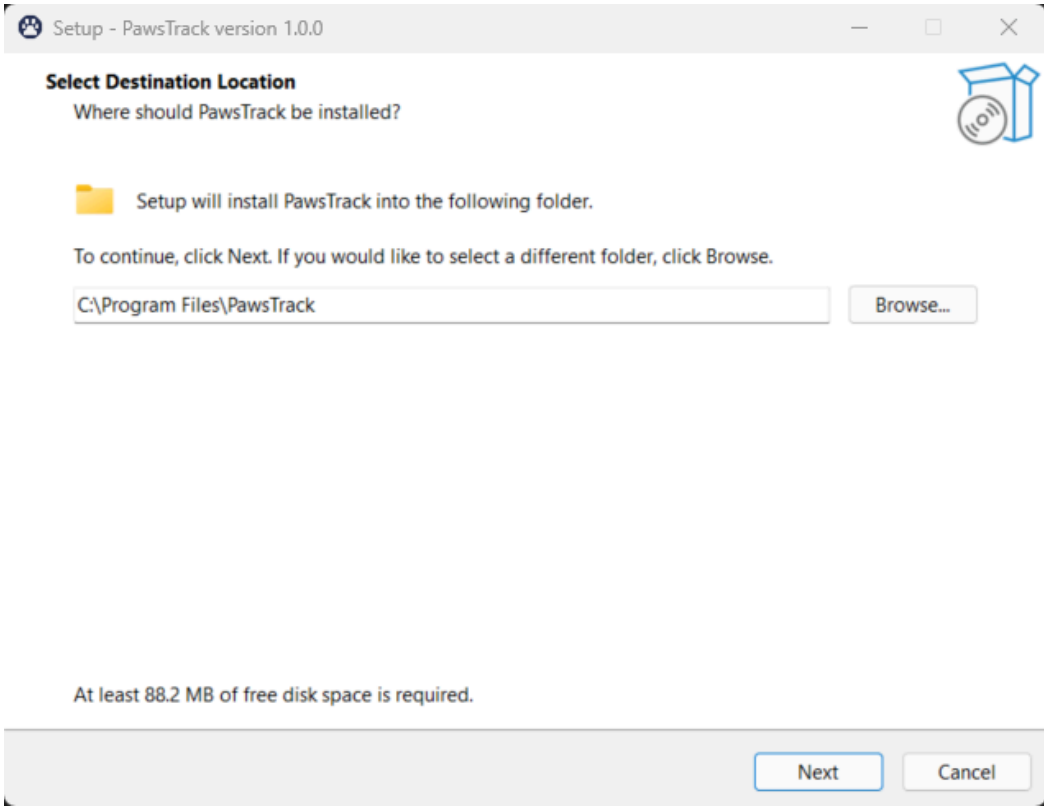
1. Locate and double-click the downloaded installation file (PawsTrackSetup.exe).
2. Select the installation mode.



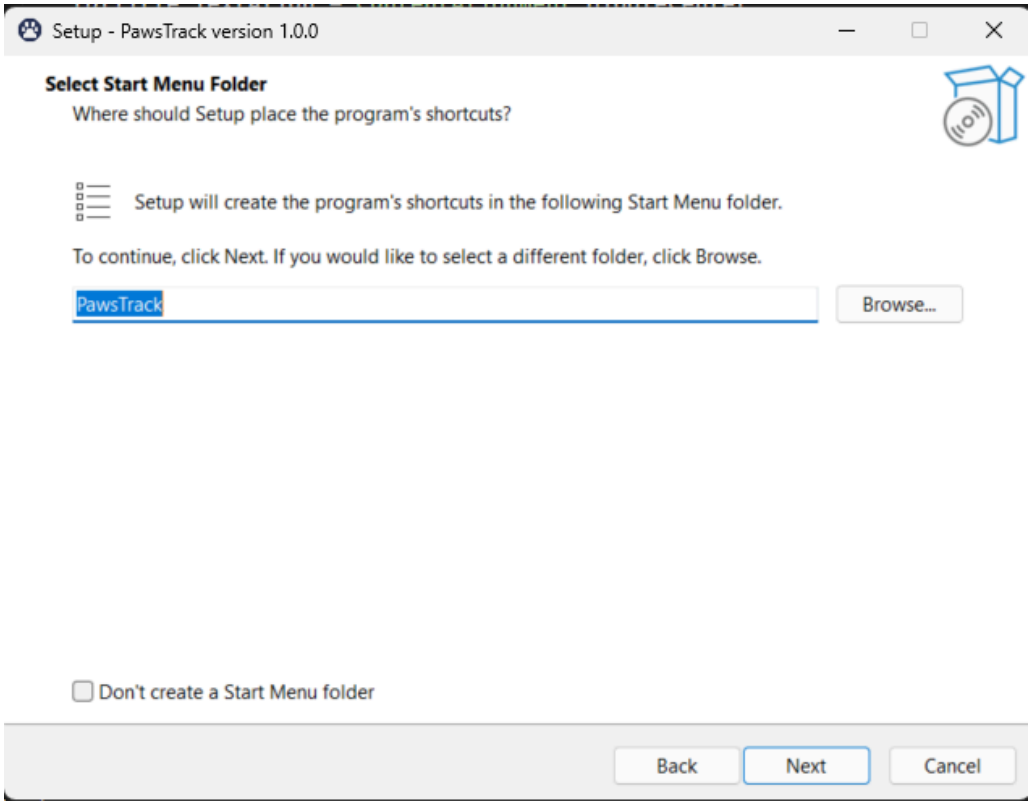
3. If an installation permissions request appears, click "Yes" to allow the application to make changes to your device.



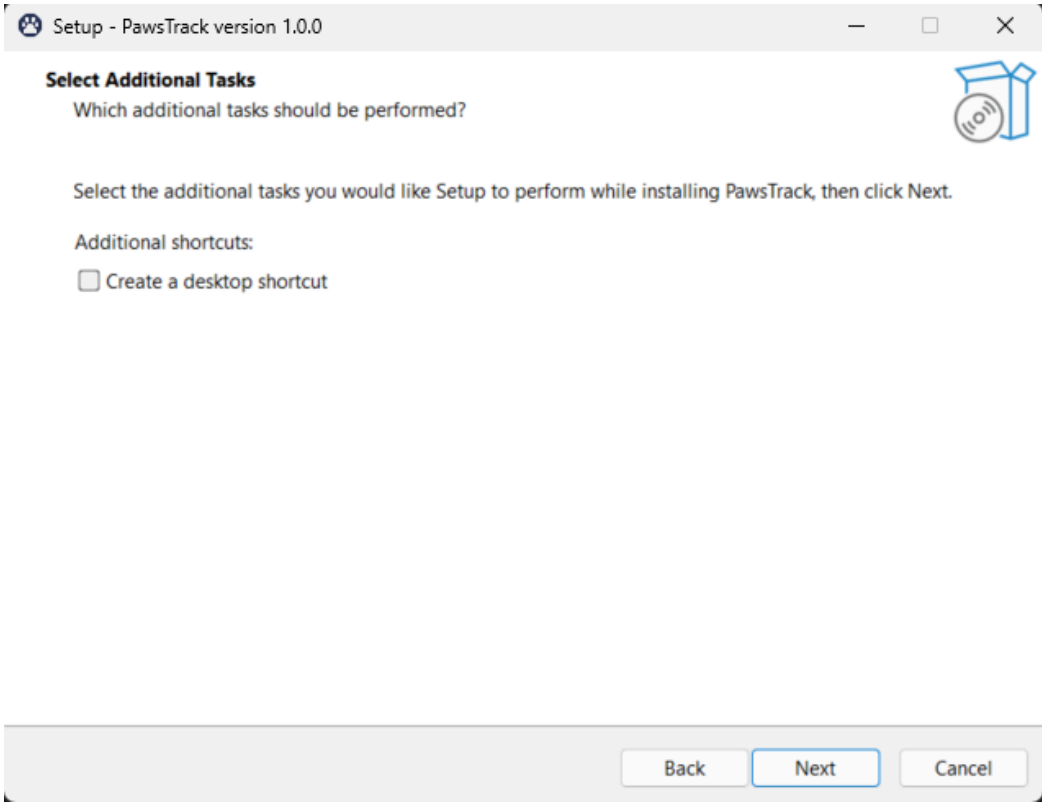
4. Select the destination folder for the installation. The default location is C:\Program Files\PawsTrack. Then click Next.



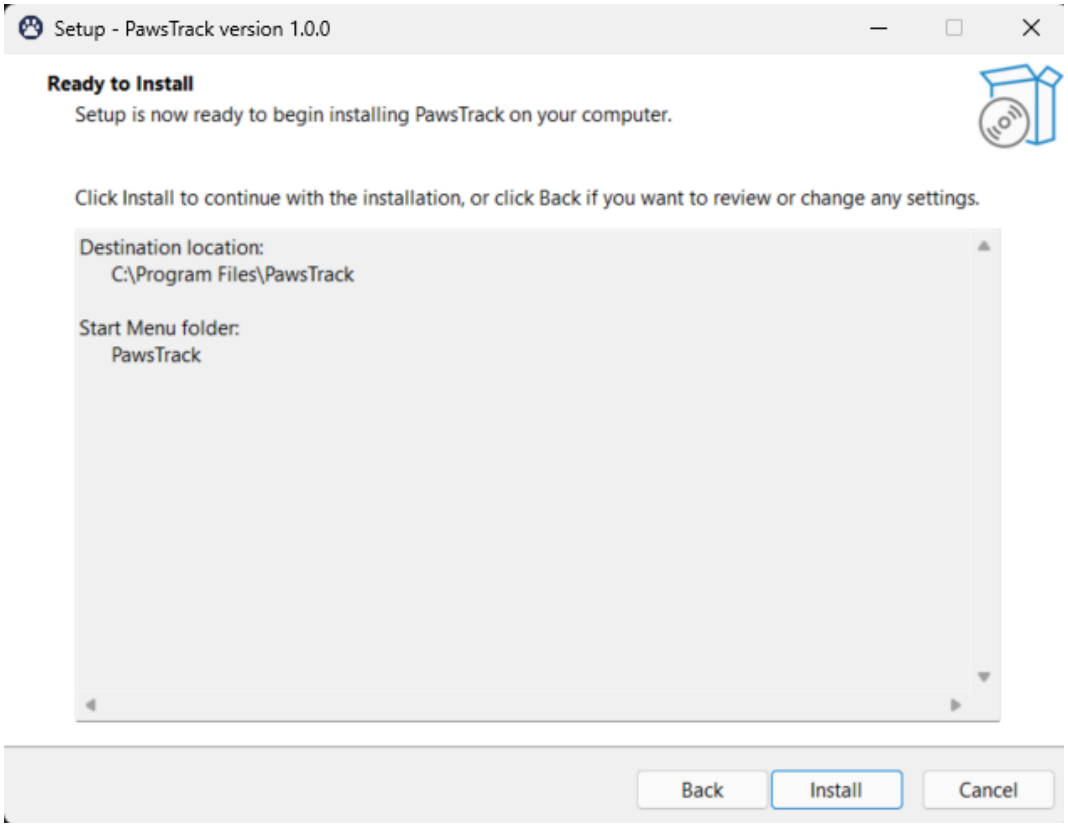
5. Choose whether you want a folder in the start menu and then click Next.



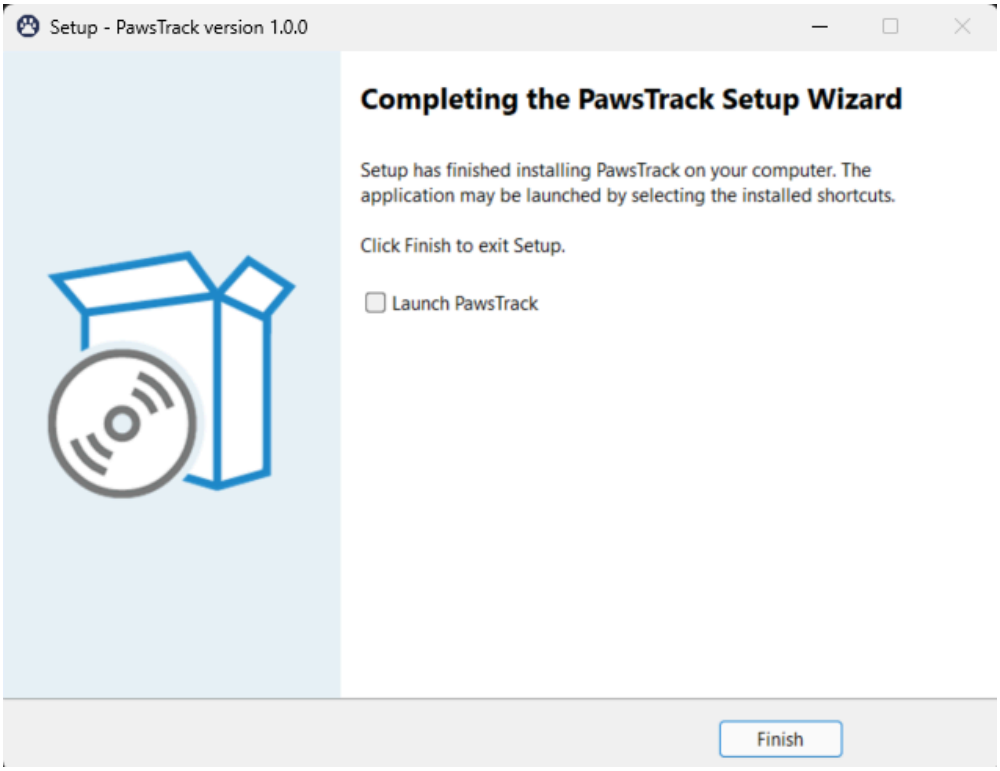
6. Choose whether you want a desktop shortcut and then Next.



7. Click "Install".



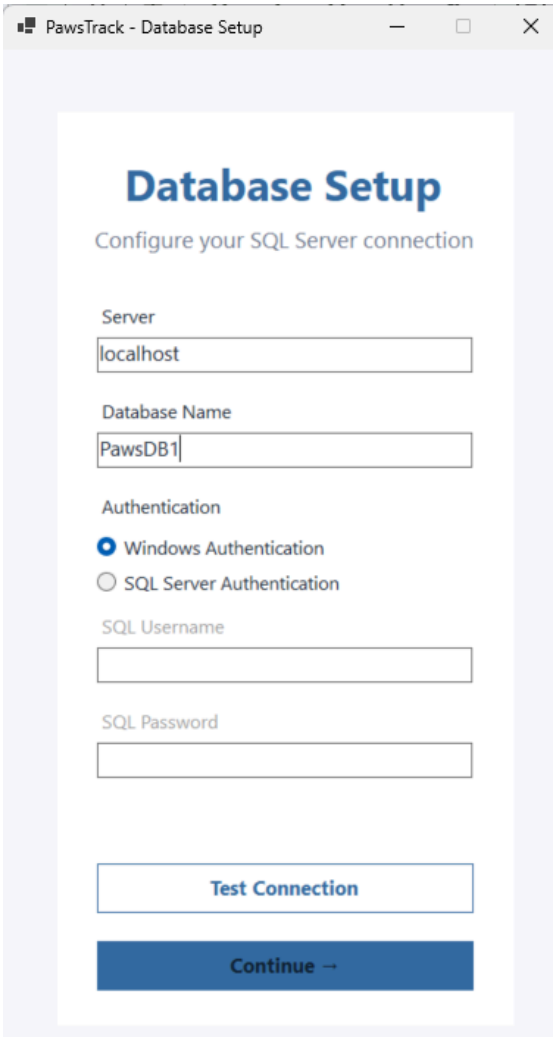
8. Once the installation is complete, you can choose whether you want to launch the application and then click "Finish". The application will start automatically, or you can run it from the desktop or the start menu.



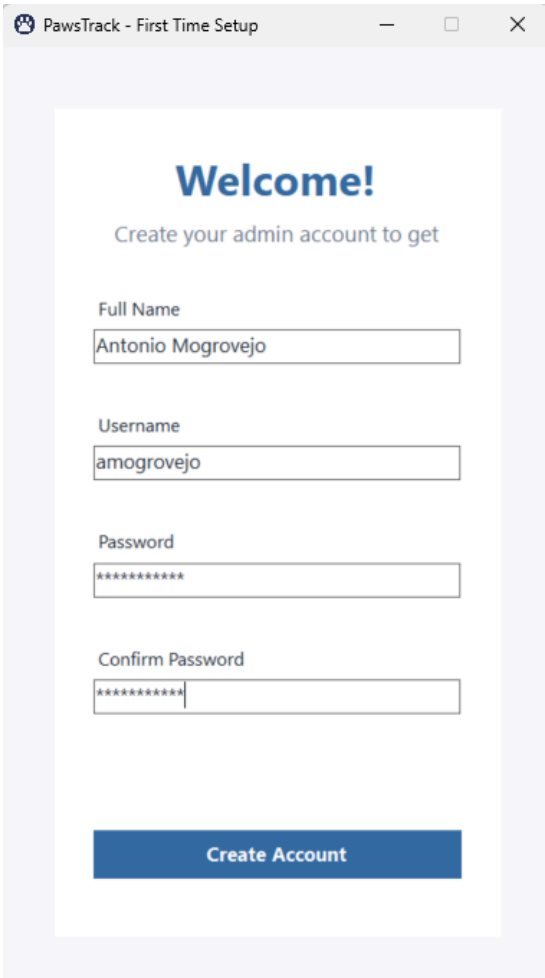
3. First Use and Initial Configuration

3.1 Initial Configuration.

1. When starting the application for the first time, the database connection configuration screen will appear:



2. Add all the connection details for your database and click on Test Connection. If the connection was satisfactory, you can click on Continue, otherwise you will not be able to proceed.
3. Once the database connection is configured correctly, proceed to create the administration account. This account will allow you to reset passwords for dog walker users. Safeguard the administrator user credentials as there is only one administrator user for the system.

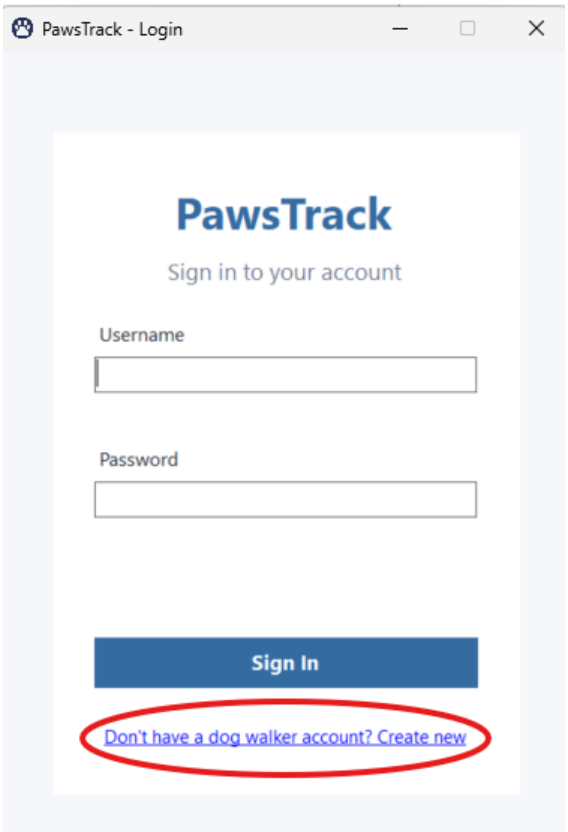


4. After correctly configuring the administration user, the system will be ready for use. If you are an administration user, you can now enter the system. If you are a new dog walker user, click "Don't have a dog walker account? Create new" and follow the instructions to create a new account.

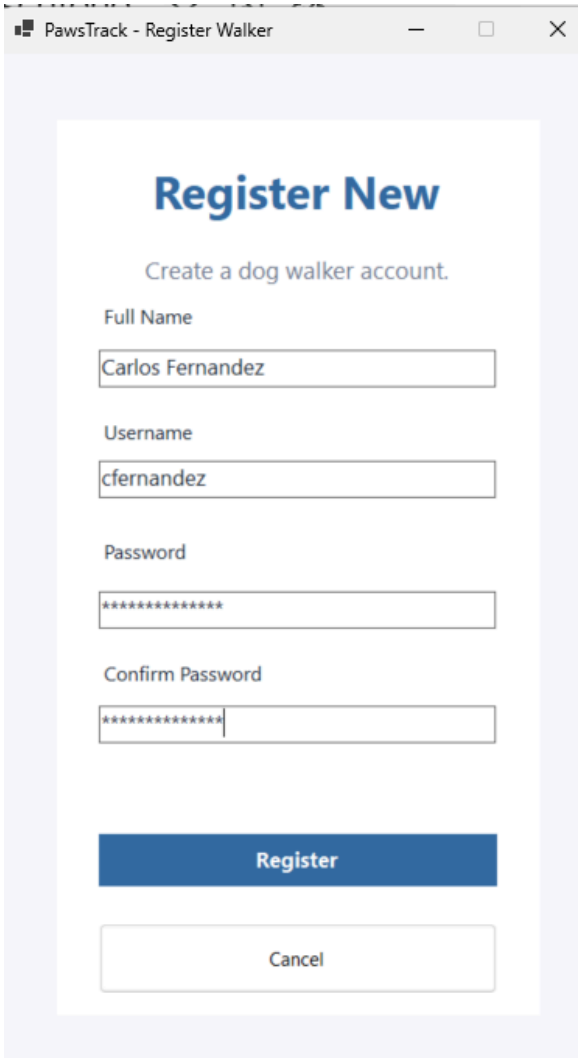
3.2 Using the system with the dog walker role.

3.2.1. Creating your new dog walker user.

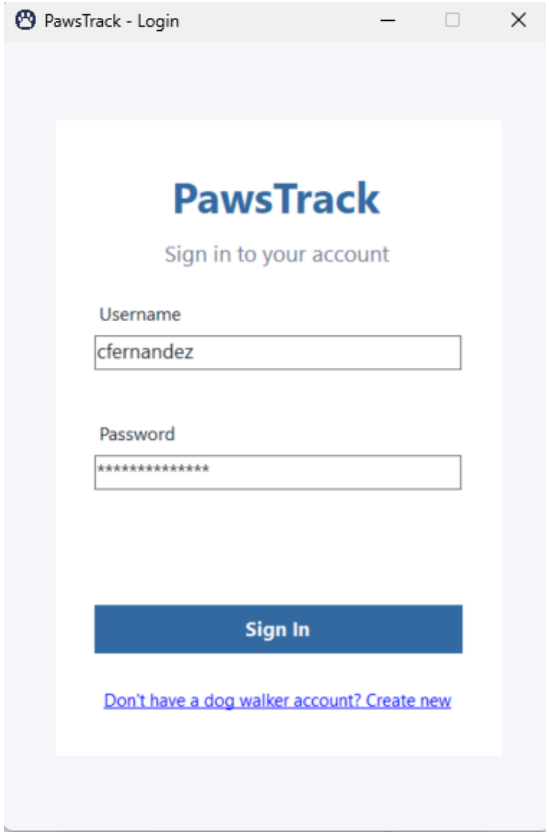
1. If you are a new dog walker user, you can create a new user from the system's initial screen by clicking on the link "Don't have a dog walker account? Create new",



2. Register your user data and click Register.

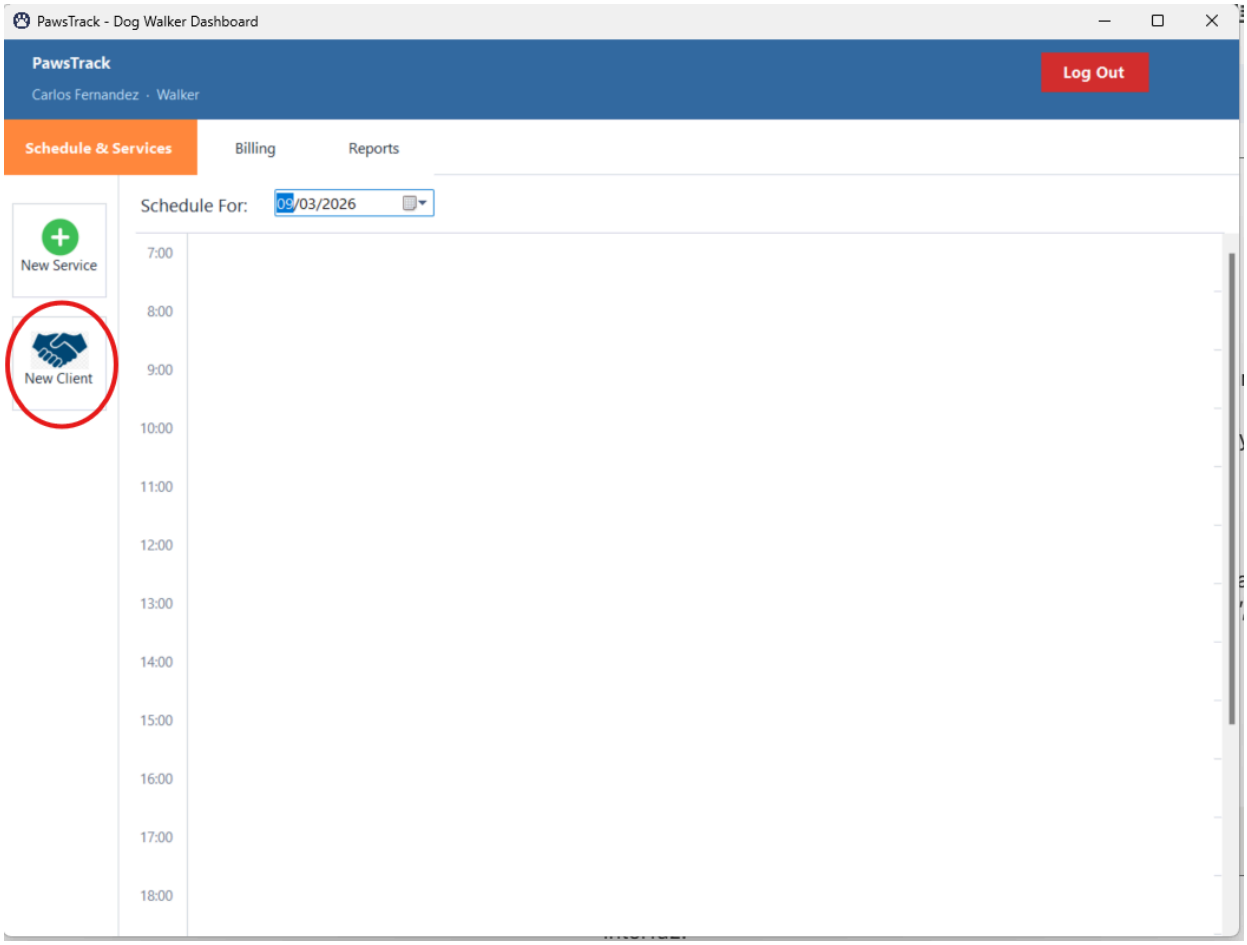


3. The system will confirm the creation of your user and you can log into the system.

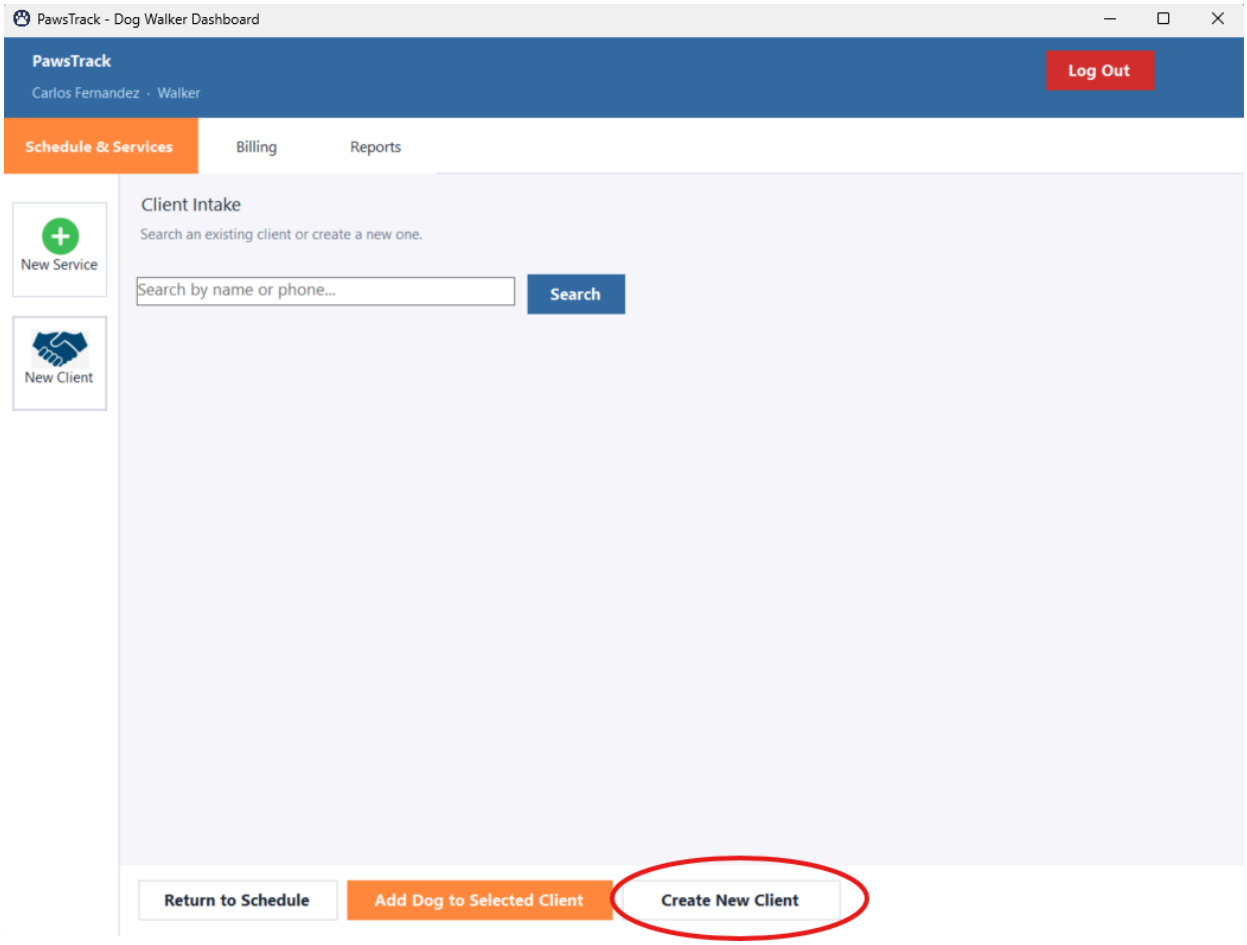


3.2.2. Registering new clients in the system.

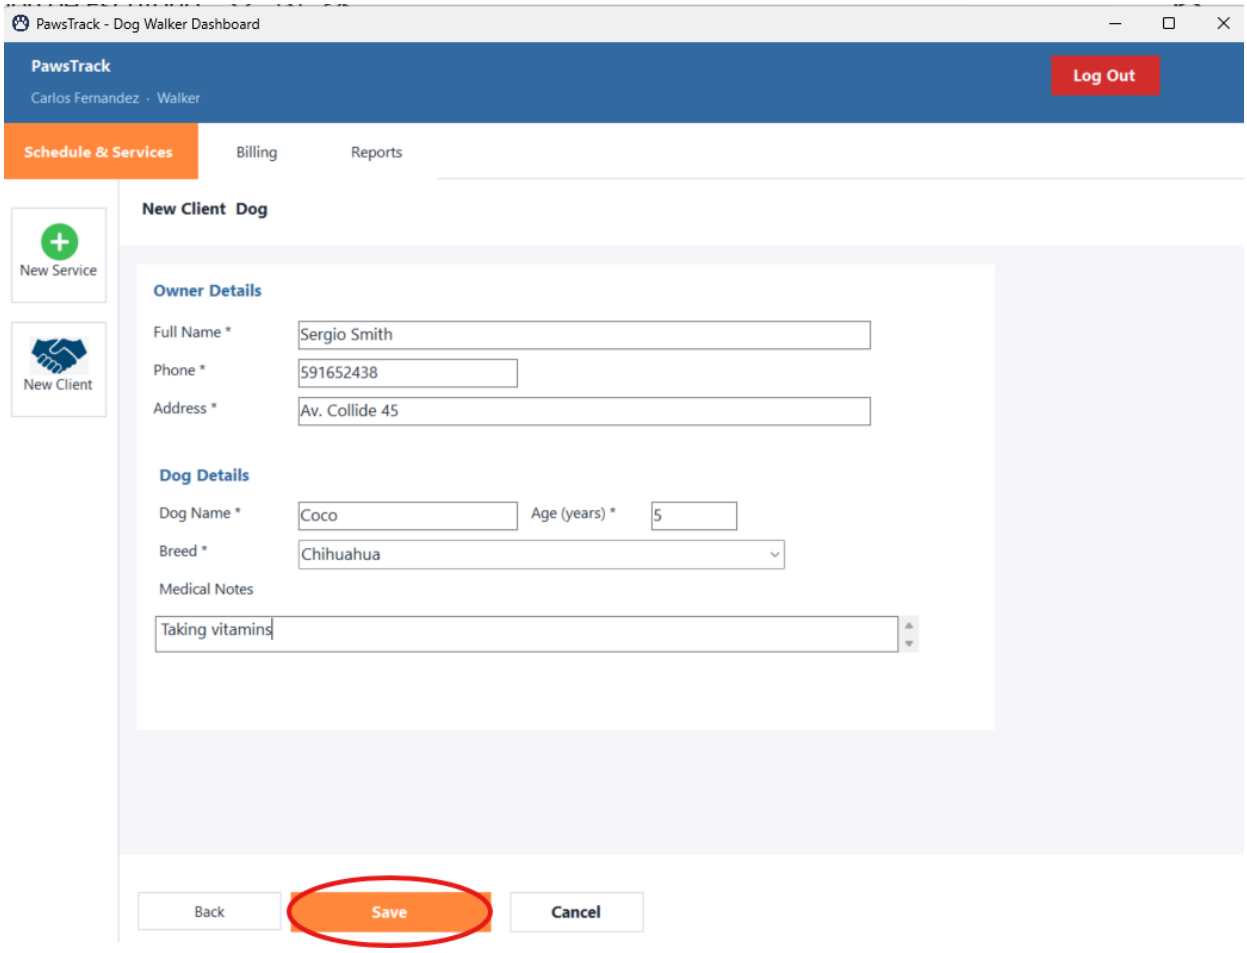
1. From the initial system screen, click on New Client:



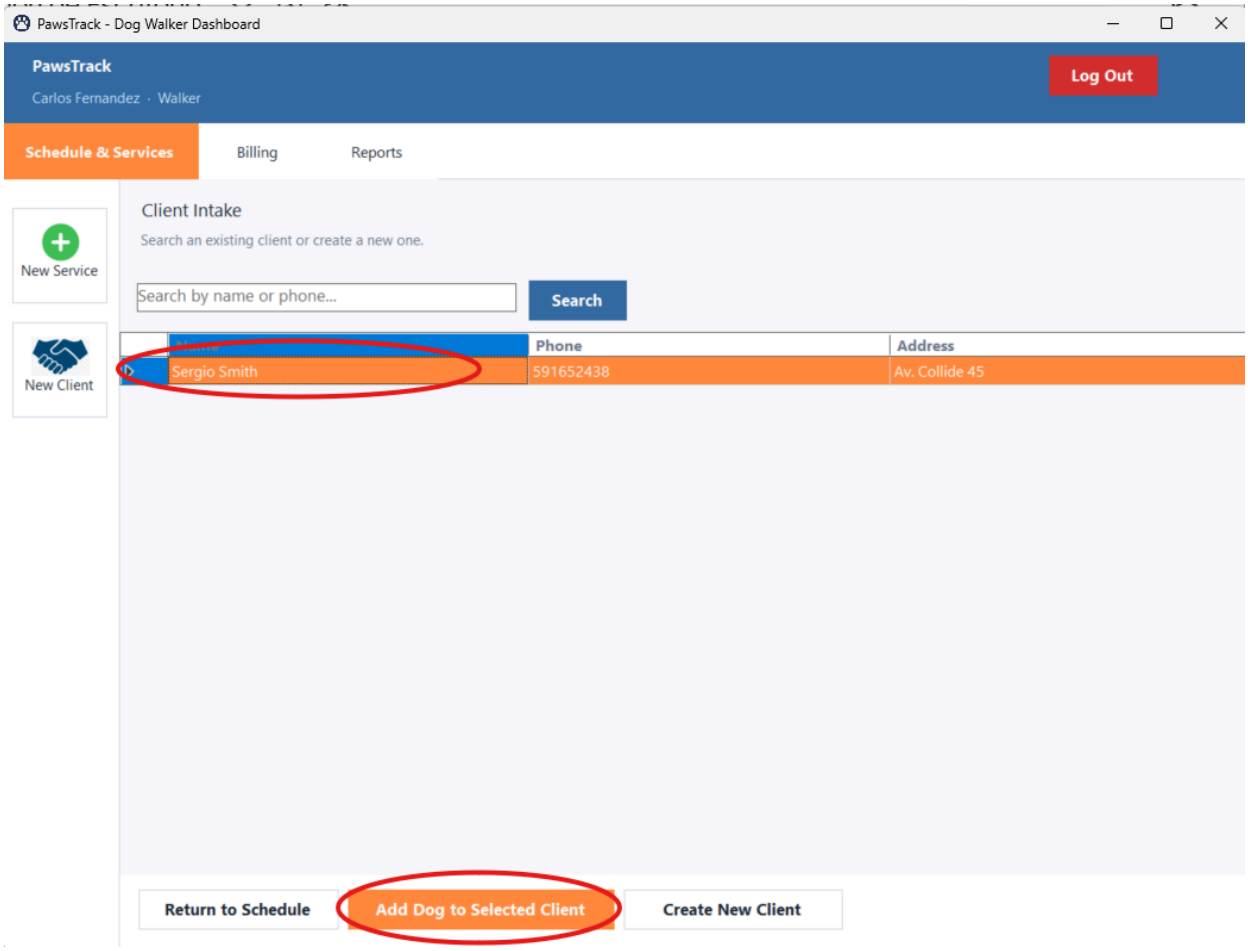
2. On the new client entry screen, you can search for existing clients to add a new pet or you can create a new client and pet at the same time. To create a new client and their pet simultaneously, choose the option Create New Client.



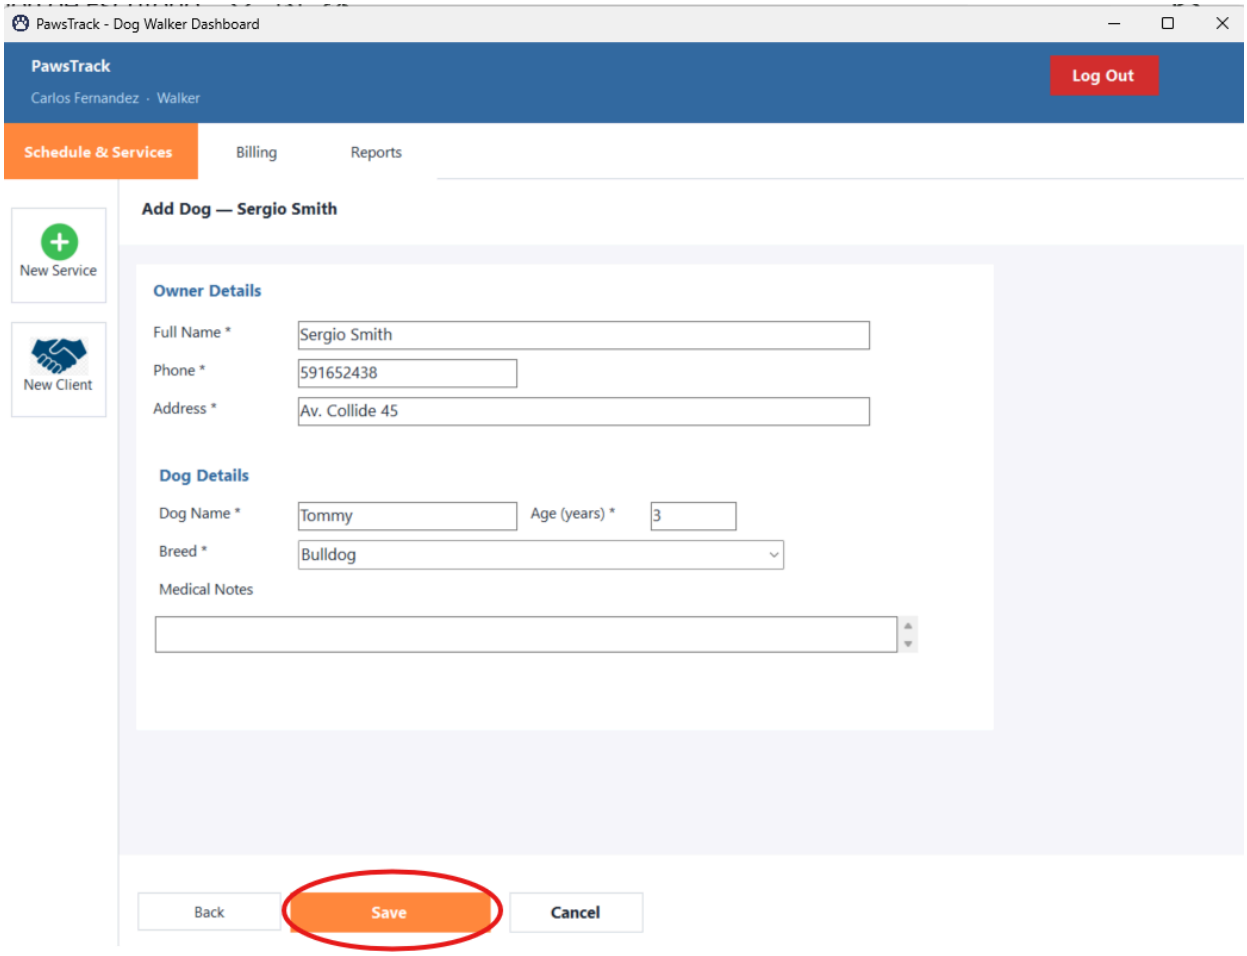
3. Enter all the client and pet details, then click Save.



4. After entering a new record, you will return to the previous screen. If you wish, you can add a new pet to an existing client. First, search for the client, then click on the client's name to select them, and then click on Add Dog to Selected Client.

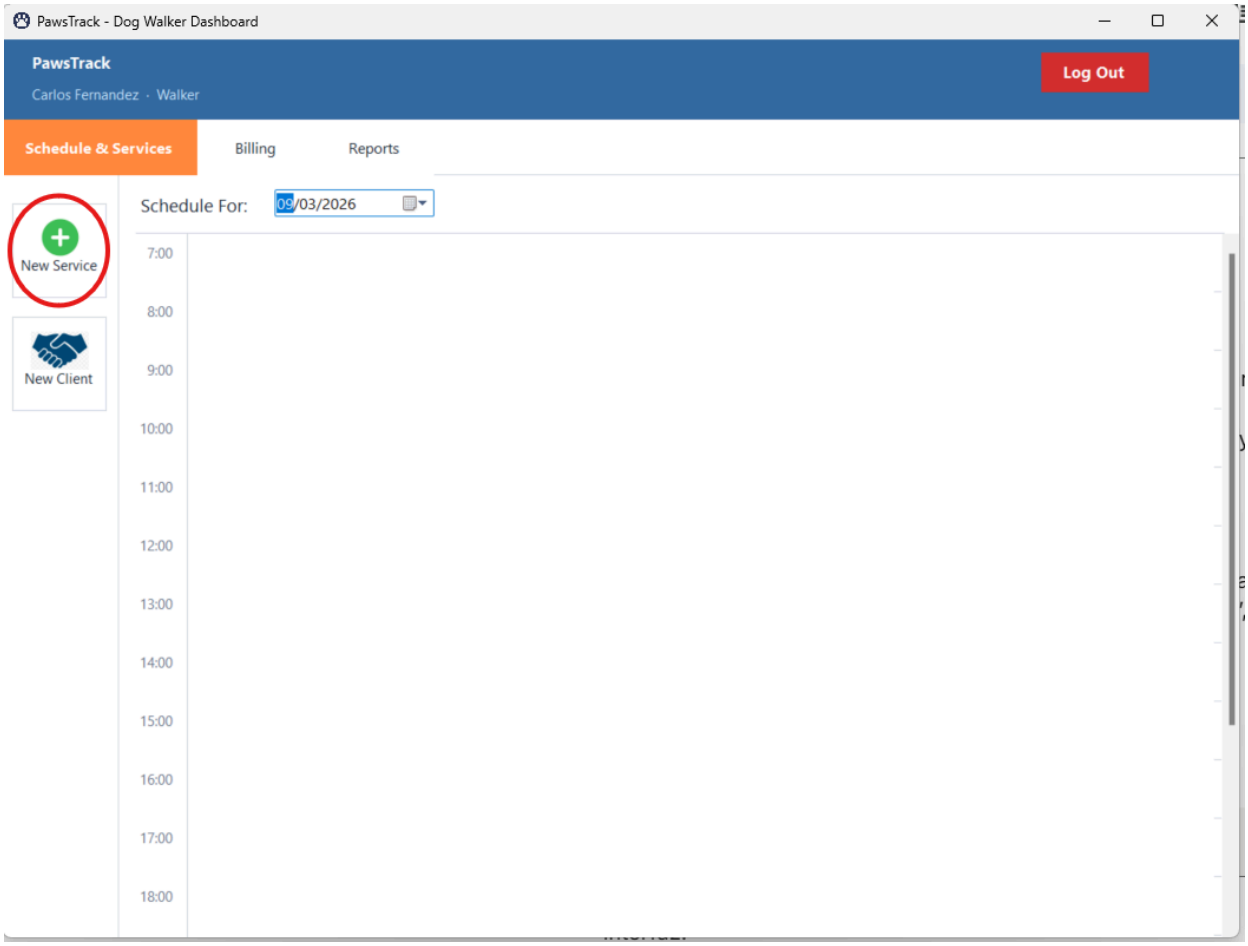


5. Complete the necessary details for the pet and then choose Save.

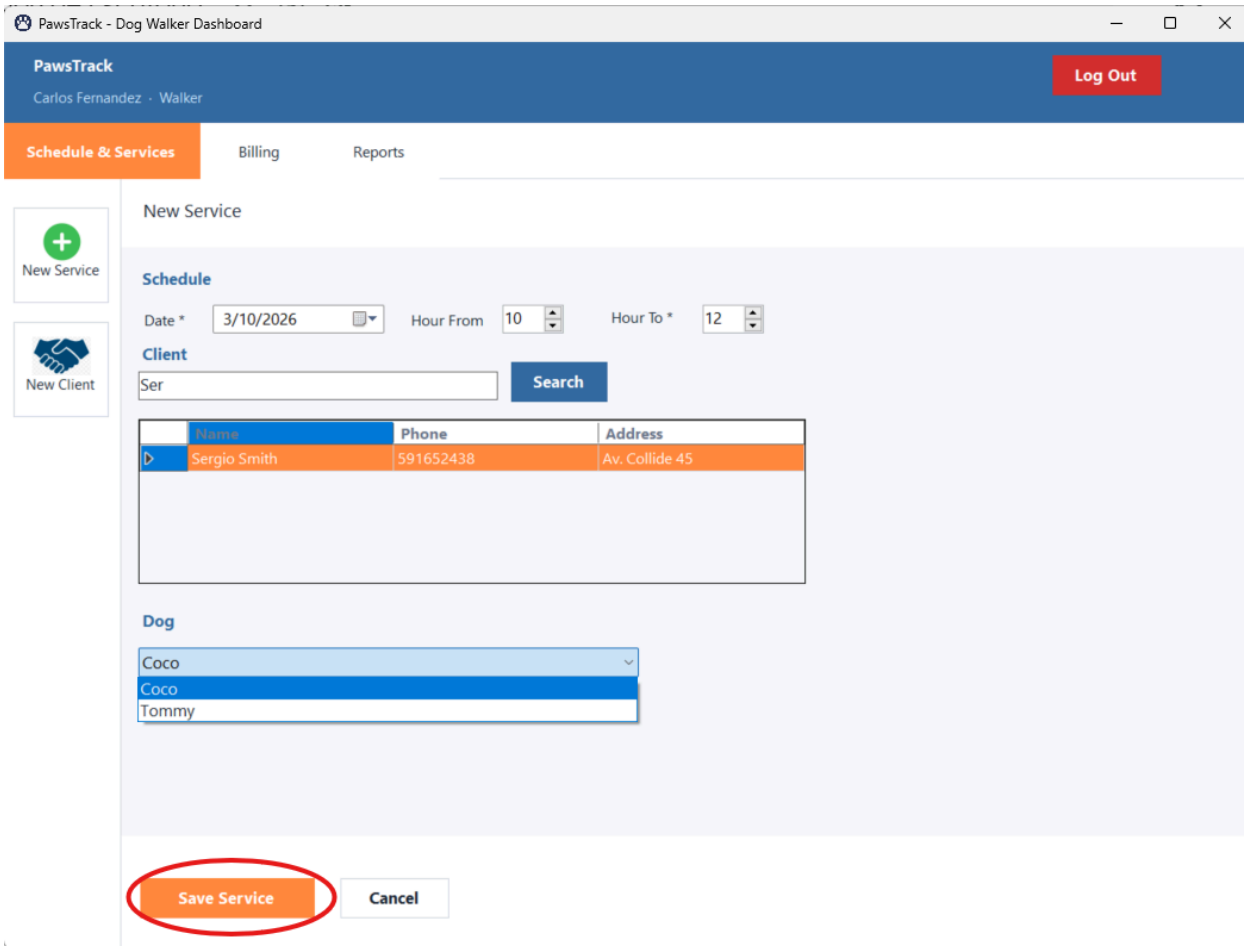


3.2.3. Registering a new dog walking service.

1. From the initial screen, choose the New service option.

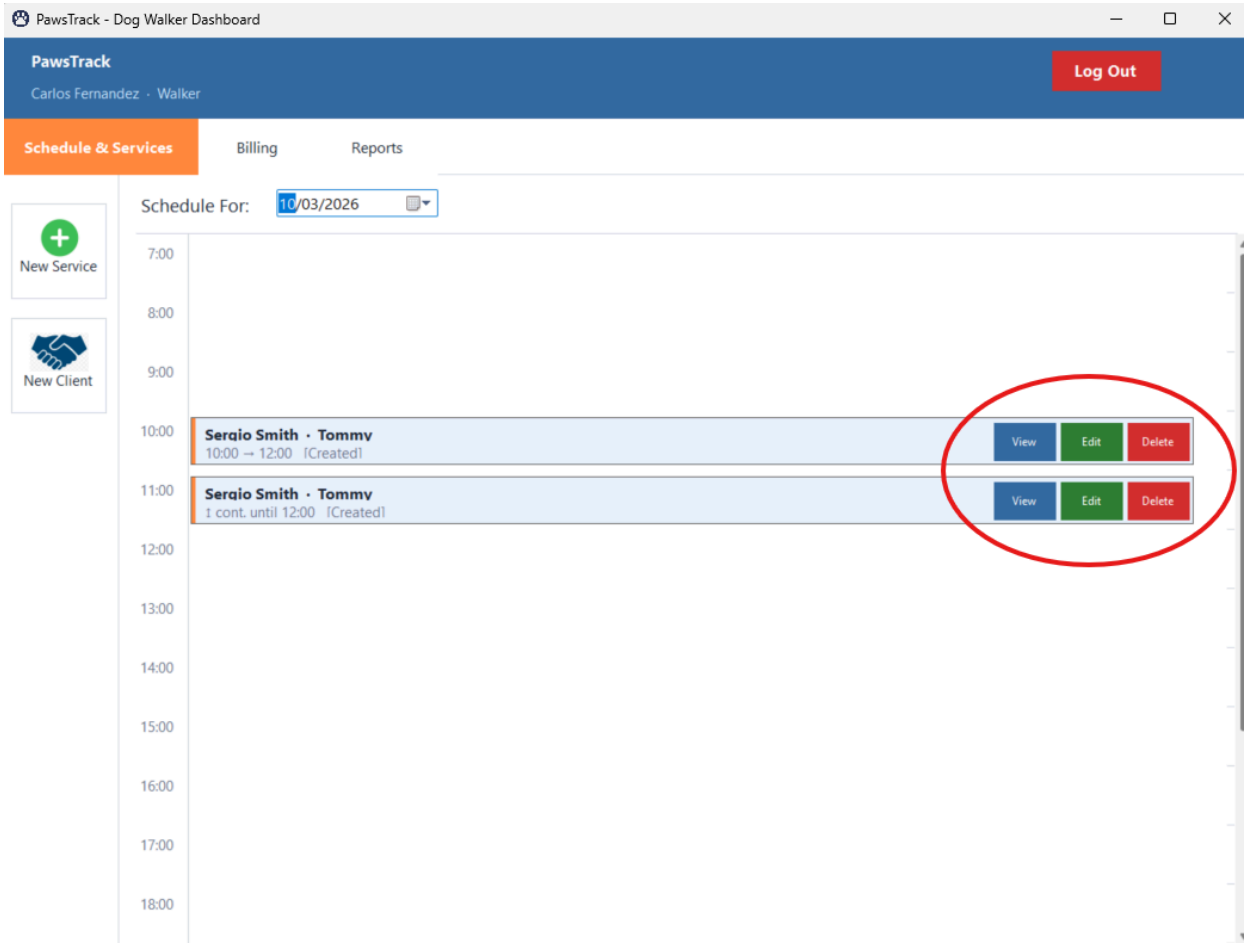


2. On the add new service screen, fill in the date details, search for the client and click on the client's name to select them, and choose the pet. Once all data is set, click on Save Service.



3.2.4. Administration of your scheduled services.

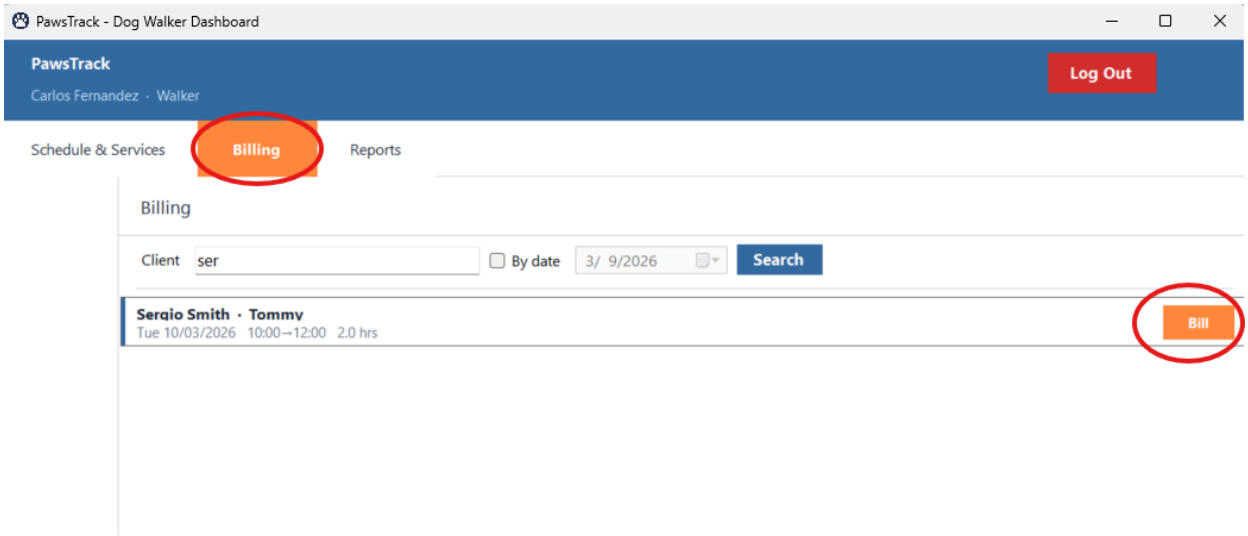
1. The main screen will show the calendar and the services you have scheduled according to the day chosen in the upper filter, and you will be able to see the services according to the established hours.



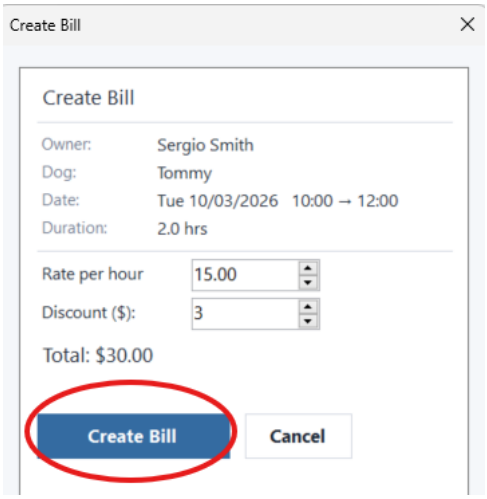
2. You can View, Edit, or Delete the services you have scheduled as long as they are not marked as completed (invoiced). If a service is completed, you will only be able to view it.

3.2.5. Invoicing your scheduled services.

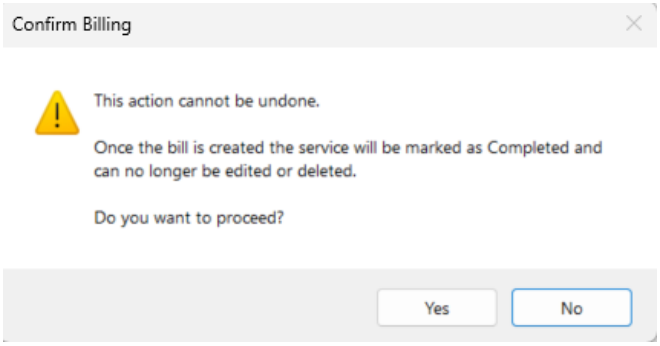
1. Choose the Billing option in the upper bar options. You can search for services by client, by day, or by both criteria. The list of services will be displayed and you can choose the Bill option for the service you want to invoice.



2. Set the hourly cost and the discount, if any, then click on Create Bill. NOTE: the invoicing operation is irreversible, so make sure to enter the data correctly before proceeding with invoicing.

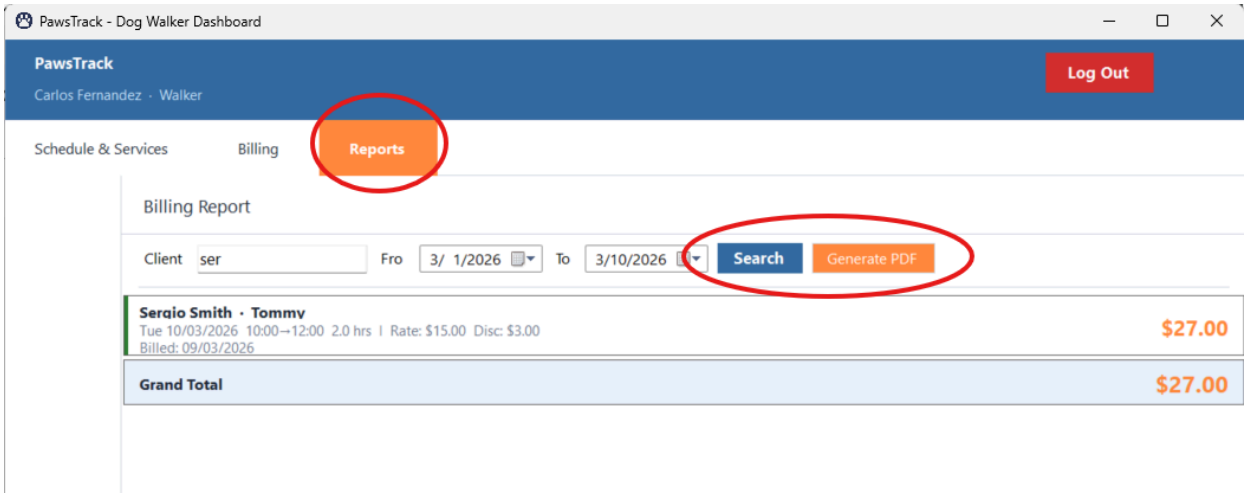


3. Accept the warning message to confirm the creation of the invoice. If you are not sure, you can cancel to re-verify the data.



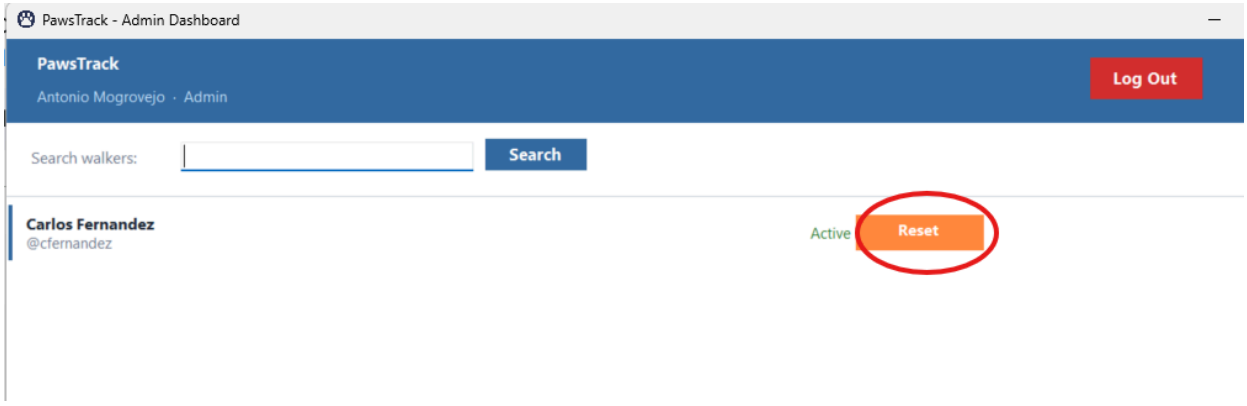
3.2.6. Generating the billing report.

1. To generate the billing report, choose the Reports option in the application's upper bar. Set the search filter by filtering by client and date range. Once the results are obtained, you can generate the report in PDF by choosing the Generate PDF option.



3.3 Using the system with the Administrator role.

1. Upon logging into the system with an administrator user, you will see the user search screen.



2. You can search for users using the filter. Once you have the list of users, you can click the Reset option for the user whose password you want to change. Set the details for the new password and choose Reset Password.
